

Policy

Our commitment to the environment

Murray Goulburn is Australia's largest dairy foods company. Through its co-operative structure, Murray Goulburn has more than 2,200 supplier shareholders. A rich mix of dairy ingredients, consumer products, food service and farm trading stores provides Murray Goulburn with a balanced portfolio of products that we can proudly sell to Australia and the world.

We strive to achieve best practice management of our environmental impacts by:

- Implementing and maintaining a framework that provides systematic management of our environmental impacts throughout all our activities and compliance with legal and other requirements.
- Setting measurable objectives and targets aimed at controlling higher risk activities and increasing awareness of the environmental impacts of our business.
- Promoting a proactive environment management philosophy based on effective communication, the systematic identification, assessment and control of environmental aspects and the encouragement of innovation.
- Maximising our resource efficiency.
- Being open and responsive to our stakeholders, importantly our suppliers and the community in which we operate.
- Providing effective resources and training to enable our employees to manage risks, be innovative and operate in a proactive environmental management manner.

As a proud Australian owned organisation, we will continually focus on prevention of pollution and minimising waste in all forms. This includes areas of our business over which we have direct operational control as well as those areas which we can influence including the broader supply chain. We also recognise the relevance that our shareholder farmers have on the environment and we will support them through developing programmes which they can use.

We want to be recognised by suppliers, consumers, customers and regulators as the environment benchmark so that Murray Goulburn is the 1st choice in dairy foods.
